# **VoIP Loudspeaker Zone Paging**

**Enhanced Network Audio Port (VIP-801)** is used when a new paging system needs to be installed or an existing paging system needs to be expanded or extended. It provides line level audio output and control contact closure when paging.

**Enhanced Network Station Port (VIP-811)** is used with single line phones to receive calls from two-way intercom stations and handsets. It can dial any VoIP paging point(s) in the network for All Call or specific group or zone loudspeaker paging.

### Central Security Paging/Intercom Control Station

### **Voice Paging Operation:**

- Dial All Call to page everyone, or dial code to page specific building
- When you hear 3 beeps, begin speaking
- Terminate page by hanging up phone **Intercom Operation:**
- Phone rings announcing incoming call
- Lift handset, communicate with remote location

**IP Network**
